MOBILE
CAPTURE

Through an API integration with your existing mobile banking app, you can easily push members' check deposits directly into TranzCapture, keeping all deposited items together. Mobile Capture offers end-to-end convenience to your members and streamlined operations for your credit union. Integrate with your existing mobile banking app to push your members' check deposits directly into TranzCapture for end-to-end convenience for your credit union and its members.

BENEFITS

+ End-to-end processing convenience:
  - Items are located in one image archive.
  - Batches may be viewed and items modified or deleted throughout the day.
  - The Batch Summary Report lists batch detail, such as on-us items, shared branching items, etc.

+ Increased settings allow more control over on-us, on-us override, Early Warning Service, and duplicates.

+ Users can view and make decisions on items that are suspended based on pre-defined criteria that include duplicate items, missing signature, missing endorsement, or EWS notifications.

About TranzCapture

Corporate One uses TranzCapture LLC, a credit union service organization, as the platform for all its item processing services. TranzCapture streamlines work through its web-based platform that offers consolidated administration and processing.

Users access TranzCapture through Members Only, Corporate One's online member portal, and conduct all item processing work, including verifying items, viewing archives and running reports from one consolidated platform. Members can count on robust reporting, real-time duplicate item and batch detection and same-day access to images in a seven-year archive.

How Does it Work?

The TranzCapture API (Application Programming Interface) is provided to a credit union's mobile banking vendor to integrate into their existing mobile banking app. Mobile Capture functionality launches within the credit union's existing mobile banking app. Credit union members use their device to launch the app and use the camera to capture an image of the front and back of the check. Images are transmitted immediately for processing or put in queue for additional validation. The look, layout and messaging are governed by the capabilities of the credit union's mobile banking vendor.

FEATURES

+ Integration is available with more than 20 mobile banking providers.

+ Image quality determination is immediate.

+ Robust reporting includes check images.

+ Create posting files, which eliminates the need for your credit union's staff to manually post credits to members' accounts.

+ Mitigation features allow credit unions to set up groups for common review criteria, such as batch count, batch amount, daily count, daily amount, single amount and scan limit.

+ Set parameters during implementation for a range of variables and update them at any time.

+ Real-time and/or next-day Early Warning® Deposit Chek® fraud protection is optional across all deposit channels (different thresholds can be set for each channel).
